Fullstack Software Engineer at Revers.io, driving the development and modernization of a SaaS platform — architecture, full-stack enhancements, and scaling. I contribute to continuous product improvement, both cross-functionally and on specific initiatives. With strong experience across the entire stack (React, Node.js, PHP/Symfony), I bring an end-to-end perspective, from database design to user interface. I value clean code, mentoring, and pragmatic decisions. A tech enthusiast, I love experimenting with new development tools, whether AI-related or not.

EXPERIENCE

Fullstack Tech Lead (since 2022) · Fullstack Software Engineer (2019—2021)

2019 — Present

[Revers.io](#)

SaaS after-sales management platform for retailers (refunds, repairs, on-site interventions).

- Driving application modernization and architecture: UI redesigns, API integrations, React / TypeScript / Node.js / GraphQL.
- AI in the product and in delivery: LLM-powered features integrated into the platform, and AI code review in the CI pipeline.
- Set up an AI-automated development workflow: watching what exists on the market, keeping what fits the company and reusing it through custom skills and automations, for the development process as well as business processes.
- Result: many new features delivered, a self-improving process, and a safety and code-quality harness built into development.
- Technical analysis and estimation of new features, technical trade-offs alongside the product team.
- Code review and mentoring of junior developers, growing the team's skills.
- Hardening the platform: unit and E2E tests, production incident support.
- Detecting and addressing technical debt continuously.
- Contributing to continuous product improvement, proactively or through analysis of customer-funnel feedback.

Consultant Engineer

2018 — 2019

[Addstones — BNP Paribas Asset Management](#)

- Blue Prism automations: control of fund/ETF factsheets and consistency checks on published data.
- Automation of the client data update and termination journey (KYC) toward Salesforce, with inconsistency detection and enforcement of regulatory rules.
- Developed a code analyzer for Blue Prism processes.
- Works-council grants management tool (React, .NET API).

Consultant Engineer

2016 — 2018

[Bouygues Telecom](#)

- PoC for PSA Auto & Bank: automation of vehicle-registration processing and data collection (UiPath, VB.NET, Node.js / Puppeteer).
- Development and maintenance of Reflex Ticketing, the incident-support tool for enterprise clients.
- End-to-end features: ticket lifecycle, notifications, dashboards.
- REST APIs and database integrations.
- Participation in agile ceremonies (sprint planning, code reviews, CI/CD).

Consultant Engineer

2014 — 2016

Talan Tunisie

- Delivering and evolving projects for Société Générale, RATP, SFR, Quick Belux and Bouygues Telecom.
- Société Générale: HR management and university-contact management applications (PHP, AngularJS, MySQL).
- RATP: evolution of the ODEXO tool for analyzing metro-line equipment data (PHP).
- Quick Belux: restaurant back-office and centralized supervision platform (Symfony, JavaScript).
- SFR: mobile-plan configuration module for the online store (AngularJS, J2EE).

SKILLS

BACKEND

- Node.js Symfony / PHP Nest C# GraphQL
- MySQL PostgreSQL MongoDB

AI-ASSISTED DEVELOPMENT

- Claude Code MCP WebMCP Context Engineering
- Custom Skills Dynamic Workflows
- Smart GitHub Actions AI Code Review

QUALITY

- Jest Vitest Testing Library Cypress
- Code Review

TOOLS

- Webpack Vite Git GitHub Jenkins

INFRASTRUCTURE

- Azure DevOps Cloudflare Datadog

FRONTEND

- React Next.js TypeScript Redux / Redux-Saga
- Zustand Storybook Tailwind CSS

AI IN PRODUCTS

- LLM Integration Prompt Engineering
- TOON / Token Optimization Process Automation

STYLING

- Styled Components Bootstrap

RPA

- UiPath Blue Prism

EDUCATION

École Nationale d'Ingénieurs de Tunis (ENIT)

Software Engineering

2011 – 2014

Institut Préparatoire aux Études d'Ingénieurs d'El Manar

Engineering preparatory classes

2009 – 2011
